Physical Geography

Volume 62 Number 1

March 2010

Journal of Physical Geography

1. Program Vision

The department of medical devices techniques at the Najaf technical institute seeks to be a leading scientific center to supply the health institutions and the market with qualified personnel with modern science and technology for various electronic and electromechanical medical devices.

2. Program Mission

Preparing intermediate technical staff specialized in the field of installing, calibrating, operating and maintaining medical devices of all types.

3. Program Objectives

The program aims to prepare specialized technical personnel who are scientifically and practically qualified at a technical level consistent with the requirements of technological development and the advancement of the department's specialization.

4. Program Accreditation

Does the program have program accreditation? And from which agency? No.

5. Other external influences

Is there a sponsor for the program? No.

6. Program Structure

Program Structure	Number of Courses	Credit hours	Percentage	Reviews *
Institution Requirements	19	109	17.4%	
College Requirements	15	125	12%	
Department Requirements	15	125	12%	
Summer Training		Without units		
Other				

* This can include notes whether the course is basic or optional.

7. Program Description

Year/Level	Course Code	Course Name	Credit Hours	
			Theoretical	Practical
2 nd stage		Electromechanical Medical Devices	3	3
2 nd stage		Microcomputers	2	2
2 nd stage		Control	2	2
2 nd stage		Technical English Language	1	-
2 nd stage		Electronic measuring devices	2	2
2 nd stage		Maintenance of medical devices	1	2
2 nd stage		Electronic medical devices	1	2
2 nd stage		Computer applications 2	1	2
2 nd stage		Electronic circuits	2	2
2 nd stage		Digital circuits	2	2
2 nd stage		Electronics	2	2
2 nd stage		Technical English Language	1	-
2 nd stage		Mathematics	2	-
2 nd stage		Electrical Circuits and Measurements	2	2
2 nd stage		Human rights and democracy	2	-
2 nd stage		Computer Applications 1	1	2
2 nd stage		Engineering Drawing	-	2
2 nd stage		Physiology	2	-

8. Expected learning outcomes of the program

Knowledge	
Knowledge and understanding	1- Learning how to collect information for public needs. 2- Learning about the operation of equipment and laboratories and how to use medical, diagnostic and therapeutic devices. 3- Learning how to deal with these devices. 4- Following the industrial safety service in laboratories.
Skills	
Subject-based Skills	1- Training the student on all laboratories and make them awareness that how dangerous they are. 2- Training the student on how to connect the devicis and how to implement the experiments. 3- Training the student on how to care the laboratory equipment and how to deal with it.
Ethics	
Ethical goals	1- Honesty 2- Fidelity and loyalty 3- Integrity 4- Respect for university, institution, department and colleagues.

9. Teaching and Learning Strategies

The methods that used in teaching of modules are:

- 1- Lectures by the instructor (lecturer).
- 2- Class discussion directed by the instructor.
- 3- Recitation oral questions by teacher answered orally by students.
- 4- Construction of diagrams, charts, or graphs by the instructor.
- 5- Using of white board by the instructor as aid in teaching.
- 6- Tutorial.
- 7- Reading some lecture notes aloud to emphasize on the important points.

10. Evaluation methods

- 1- Exam such as: quizzes, 1st term, 2nd term and final exams.

- 2- Tutorial for the modules in order to discuss the questions that the students had. Correct answers of the students will be taken as additional marks.
- 3- Homework, this includes mathematical analysis of some module's problems.
- 4- Simulation of some modules using different software like Matlab from National Instruments company (Matlab was originally called Electronics Workbench).

11. Faculty

Faculty Members

Academic Rank	Specification		Special Requirements (if applicable)	Number of the teaching staff	
	General	Special		Staff	Lecturer
Associate Professor	Ph.D. Biomedical Engineering	Biomedical Engineering		1	
Lecturer	Ph.D. Electrical Engineering	Communications Engineering		1	
Lecturer	Ph.D. Electrical Engineering	Electrical and electronic engineering		1	
Lecturer	Mosser's degree in electrical engineering	electrical engineering		1	
Lecturer	Mosser's degree in electrical	Biomedical		1	

	engineering				
Assistant Lecturer	Master's degree in Computer Engineering	Computer Engineering		11	
Assistant Lecturer	Master's degree in Electrical Engineering	Power		11	
Assistant Lecturer	Master's degree in Electrical Engineering	Renewable Energy		11	
Assistant Lecturer	Master's degree in Electrical Engineering	Electrical Engineering		11	
Assistant Lecturer	Master's degree in Electrical Engineering	Electronic		11	
Assistant Lecturer	Master's degree in Electrical Engineering	Electronics and Communications		1	
Assistant Lecturer	Master's degree in Electrical Engineering	Electronics		1	
Assistant Lecturer	Master's degree in Electrical Engineering	Electrical Power		11	

Professional Development

Mentoring new faculty members

The head of the department receives new, full-time and part-time faculty members. After welcoming them, he gives them a detailed picture of the work mechanism in the department and everything that related to all academic subjects and tasks.

Professional development of faculty members

Academic and professional development for department staff includes participation in seminars and workshops in various Iraqi universities and institutions, as well as participation in scientific conferences inside and outside Iraq.

12. Acceptance Criterion

- 1- The average of the student.
- 2- The branch (scientific, professional).
- 3- Personal interview for the student.
- 4- Determine the ratio of males to females.
- 5- Determine the number of students according to the department's admission plan.

13. The most important sources of information about the program

- 1—Text books.
- 2—Books recommended by lecturers
- 3—Some reliable internet sites.

14. Program Development Plan

Every lecturer has the right to develop the curriculum by adding or deleting to keep pace with scientific developments by a ratio not exceeding 10% according to the Ministry's instructions.

2. Course Code:					
3. Semester / Year: Year					
4. Description Preparation Date: 16-3-2024					
5. Available Attendance Forms: attendance in person					
6. Number of Credit Hours (Total) / Number of Units (Total) 4 hours per week/ 4 units					
7. Course administrator's name (mention all, if more than one name) Name: Ali Nasir Jarnialedden Email: ali.jarnaluddin@giu.edu.iq					
8. Course Objectives					
Course Objectives	<ul style="list-style-type: none"> • Use of electronic laboratory equipment. • Connecting electronic components in different circuits • Learn specifications and inspection of electronic components 				
9. Teaching and Learning Strategies					
Strategy	<p>The methods that used in teaching of digital circuits module are:</p> <ol style="list-style-type: none"> 1. Lecture by the instructor (lecturer). 2. Class discussion directed by the instructor. 3. Recitation oral questions by teacher answered orally by students. 4- Using of white board by the instructor as aid in teaching. 5- Tutorial. 				
10. Course Structure					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method

First	4	The student understand The lesson.	Learn about the use of equipment used in the laboratory.	Lecture using whiteboard	Quiz, discussion and homework.
Second	4	The student understand The lesson.	P-n junction forward and reverse.	Lecture using whiteboard	Quiz, discussion and homework.
Third	4	The student understand The lesson.	A half-wave rectifier.	Lecture using whiteboard	Quiz, discussion and homework.
Fourth	4	The student understand The lesson.	Full wave rectifier using a centre tap transformer	Lecture using whiteboard	Quiz, discussion and homework.
Fifth	4	The student understand The lesson.	Full-wave bridge rectifier.	Lecture using whiteboard	Quiz, discussion and homework.
Sixth	4	The student understand The lesson.	Half-wave rectifier with a filter.	Lecture using whiteboard	Quiz, discussion and homework.
Seventh	4	The student understand The lesson.	Full-wave rectifier with a filter.	Lecture using whiteboard	Quiz, discussion and homework.
Eighth	4	The student understand The lesson.	Constant voltage multiplier.	Lecture using whiteboard	Quiz, discussion and homework.
Ninth	4	The student understand The lesson.	Double Zener – forward and reverse properties	Lecture using whiteboard	Quiz, discussion and homework.
Tenth	4	The student understand The lesson.	Use of a Zener diode in constant voltage regulation.	Lecture using whiteboard	Quiz, discussion and homework.
Eleventh	4	The student understand The lesson.	bipolar transistor - common base connection properties.	Lecture using whiteboard	Quiz, discussion and homework.
twelfth	4	The student understand The lesson.	Common emitter connection	Lecture using whiteboard	Quiz, discussion and homework.
Thirteenth	4	The student understand The lesson.	Common base amplifier.	Lecture using whiteboard	Quiz, discussion and homework.
fourteenth	4	The student understand The lesson.	Common emitter amplifier, Nineteenth Combined Emitter Amplifier.	Lecture using whiteboard	Quiz, discussion and homework.
Fifteenth	4	The student understand	Joint emitters amplifier	Lecture using	Quiz, discussion and homework.

		The lesson		whiteboard	
Sixteenth	4	The student understands The lesson	Sixteenth: Using a transistor to voltage regulation.	Lecture using whiteboard	Quiz, discussion and homework.
Seventeenth	4	The student understands The lesson	PET transistor - property clives	Lecture using whiteboard	Quiz, discussion and homework.
eighteen	4	The student understands The lesson	Common source amplifier.	Lecture using whiteboard	Quiz, discussion and homework.
Nineteenth	4	The student understands The lesson	Combined tank Amplifier.	Lecture using whiteboard	Quiz, discussion and homework.
Twenty	4	The student understands The lesson	properties of light emitting diode (LED).	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-one	4	The student understands The lesson	Properties of the photosbode	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-two	4	The student understands The lesson	Use of thyristors - their properties - phase angle control.	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-third	4	The student understands The lesson	Using a thyristor as a dimmer.	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-four	4	The student understands The lesson	Hartley oscillator	Lecture using whiteboard	Quiz, discussion and homework.
25th	4	The student understands The lesson	Colets Oscillation	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-sixth	4	The student understands The lesson	The unstable vibrator	Lecture using whiteboard	Quiz, discussion and homework.
27th	4	The student understands The lesson	the stable quasi-vibrator	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-eight	4	The student understands The lesson	Bistable vibration	Lecture using whiteboard	Quiz, discussion and homework.
Twenty-nine	4	The lesson	amplifier circuit for integrated circuit use.	Lecture using whiteboard	Quiz, discussion and homework.
Thirty	4	The student understands The lesson	Using an integrated circuit to add and subtract signals.	Lecture using whiteboard	Quiz, discussion and homework.

11. Course Evaluation

- 1- Midterm theoretical exam 10/100
- 2- Midterm practical lab exam 10/100
- 3- Second term theoretical exam 10/100
- 4- Second term practical lab exam 10/100
- 5- Student activities 10/100
- 6- Final theoretical exam 40/100
- 7- Final practical lab exam 10/100

12. Learning and Teaching Resources

Required textbooks/curriculum books, if any	
Main references (sources)	Electronic basics
Recommended books and references (scientific journals, reports...)	
Electronic References: Websites	

Course Description Form

13.	Course Name: Engineering and Electrical Drawing
14.	Course Code:
15.	Semester / Year: Year
16.	Description Preparation Date: Feb 2 nd 2024
17.	Available Attendance Forms: in person
18.	Number of Credit Hours (Total) / Number of Units (Total) 90HU/6U
19.	Course administrator's name (mention all, if more than one name) Name: Sami Alan Tariqeen Abd Email: sami@aa.tu.edu.iq
20.	Course Objectives: Training the student on the correct principles of engineering drawing, draw and read electronic and electrical maps. Using AutoCAD program.
Course Objectives	
21.	Teaching and Learning Strategies
Strategy	Teaching and learning methods 1- White board & marker. 2- Data show. 3- Practical applications in Labs.

Evaluation methods

- 1- Daily exams (Quizzes).
- 2- Weekly practical application in drawings.
- 3- Midterm and final exams.

Emotional and Value goals

Evaluate the student's benefit after each week.

22. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1 st	3	Learn about the general concepts of engineering drawing.	The importance of engineering and industrial drawing - drawing tools and their uses - corrective drawing lines - painting sizes - drawing a drawing data table - definitions of point, line and surface.	Lecture + Lab	Evaluation of skills in drawing.
2 nd	3	Develop skills in drawing.	Drawing types of lines: hidden line, hidden line, center line, cutting line, cutting line for small parts, cutting line for large parts, cutting level line, dimension line, and extension line (panel drawing).	Lecture + Lab	Evaluation of skills in drawing.
3 rd	3	Develop skills in drawing.	Another painting on lines includes a group of simple geometric shapes and contains a group of lines.	Lecture + Lab	Evaluation of skills in drawing.
4 th	3	Identify symbols in drawing.	Explanation of electrical and electronic symbols.	Lecture + Lab	Evaluation of skills in drawing.
5 th	3	Develop skills in drawing.	Drawing electrical and electronic symbols board.	Lecture + Lab	Evaluation of skills in drawing.
6 th	3	Develop skills in drawing.	Writing Latin letters and numbers - a board that includes writing numbers and letters vertically and then at an angle 75° in sizes from four mm to ten mm.	Lecture + Lab	Evaluation of skills in drawing.
7 th	3	Develop skills in drawing.	Continuation of the previous painting.	Lecture + Lab	Evaluation of skills in drawing.

		drawing			drawing
8 th	3	A review to identify the basic concepts in electrical and electronic circuits.	How to distribute and install measuring devices (ammeter, voltmeter, wattmeter) and protective devices (relays - fuses - cutting devices - circuit breakers - switches).	Lecture + Lab	Evaluation of skills in drawing
9 th	3	Developing computer drawing skills	Geometric operations include: 1- Dividing a straight line in equal and unequal proportions 2- Bisecting a straight line 3- Establishing a perpendicular on a straight line or arc from a point inside and a point outside it 4- Drawing a straight line parallel to a known straight at a known distance 5- Bisecting an angle 6- Finding the centre of a known arc or circle 7- Drawing a tangent circle: Sides of a floating triangle from the inside and outside (one panel drawing)	Lecture + Lab	Evaluation of skills in drawing
10 th	3	Developing computer drawing skills	Drawing tangents to a circle: 1- Draw an arc that touches two known circles from the inside 2- Draw an arc that touches two known circles from the outside 3- Draw a straight line that touches two known circles from the outside 5- Draw an arc of a known radius that touches a straight line and a known circle.	Lecture + Lab	Evaluation of skills in drawing
11 th	3	Developing computer drawing skill	Drawing a regular polygon given the length of the side in the general way, drawing a regular pentagon given the diameter of the circle, drawing a regular hexagon given the diameter of the circle - drawing the perspective of the circle at an angle of 30°	Lecture + Lab	Evaluation of skills in drawing
12 th	3	Developing computer drawing skill	Electrical installations - drawing a special drawing for the electrical installations of a room with an attached storeroom.	Lecture + Lab	Evaluation of skills in drawing
13 th	3	Developing	Draw a diagram of the complete	Lecture	Evaluation

		computer drawing skill	connections of the fluorescent tube	- Lab	of skills in drawing
14*	3	Developing computer drawing skill	Drawing an electronic wiring board containing a group of electronic circuits.	Lecture + Lab	Evaluation of skills in drawing
15*	3	Developing computer drawing skill	Draw the simple solid shape at angles 30 and angles 45.	Lecture + Lab	Evaluation of skills in drawing
16*	3	Identify general concepts in drawing	Explaining the placement of dimensions in a drawing in a geometric manner. Drawing a painting that includes two perspectives with all dimensions in a geometric manner.	Lecture + Lab	Evaluation of skills in drawing
17*	3	Developing computer drawing skill	Drawing a complex perspective that contains cylindrical shapes or cavities - drawing a painting that includes two perspectives with the dimensions written in a geometric manner.	Lecture + Lab	Evaluation of skills in drawing
18*	3	Developing computer drawing skill	Drawing a complex perspective that contains cylindrical shapes or cavities - drawing a painting that includes two perspectives with the dimensions written in a geometric manner,	Lecture + Lab	Evaluation of skills in drawing
19*	3	Developing computer drawing skill	Drawing a board for an electronic circuit containing gates.	Lecture + Lab	Evaluation of skills in drawing
20*	3	Developing computer drawing skill	Drawing an electronic circuit board containing integrated circuits.	Lecture + Lab	Evaluation of skills in drawing
21*	3	Developing computer drawing skill	Drawing an electronic circuit board containing gates and integrated circuits	Lecture + Lab	Evaluation of skills in drawing
22*	3	Developing computer drawing skill	Applications on drawing projections from different perspectives.	Lecture + Lab	Evaluation of skills in drawing
23*	3	Developing computer drawing skill	Perspective drawing of the three views.	Lecture + Lab	Evaluation of skills in drawing
24*	3	Identify the basic concepts in drawing	Cutting objects, cutting angle - cutting lines (slicing), definition of parts that do not cut (focuses on complete cutting	Lecture + Lab	Evaluation of skills in drawing

			only), a plate that includes projections after cutting.		
25 th	3	Developing computer drawing skills	Drawing a board to control the speed of a three-phase motor	Lecture + Lab	Evaluation of skills in drawing
26 th	3	Learn how to read maps	How to read a map or set of maps for electrical circuits.	Lecture + Lab	Evaluation of skills in drawing
27 th	3	Developing computer drawing skills	Electrical drawing applications on the electronic calculator.	Lecture + Lab	Evaluation of skills in drawing
28 th	3	Developing computer drawing skills	Using Auto CAD system	Lecture + Lab	Evaluation of skills in drawing
29 th	3	Developing computer drawing skills	Use of ORCAD system	Lecture + Lab	Evaluation of skills in drawing
30 th	3	Developing computer drawing skills	Use of ORCAD system	Lecture + Lab	Evaluation of skills in drawing

23. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc:

- 1- Midterm exam 15/100
- 2- Second term exam 15/10
- 3- Student activities 20/100
- 4- Final theoretical exam 50/100

24. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Nothing
Main references (sources)	1-Descriptive Geometry - Medhat Faisal Fadil - Al-Zaman Press, 1977 2-Descriptive Geometry - Muhammad Amin Wahib - Faculty of Engineering, Ain Shams University, 1979 3-Engineering Drawing Technology ((A.W-Wander William)) MC-Graw-Hill 1977 4-Engineering Drawing Graphic Technique by: Frend MC-Graw-Hill 1976

Course Description Form

1. Course Name: Digital Circuits

2. Course Code:

3. Semester / Year: Year

4. Description Preparation Date: 14/Feb/2024

5. Available Attendance Forms: In person attendance

6. Number of Credit Hours (Total) / Number of Units (Total)
4 hours per week/ 4 units

7. Course administrator's name (mention all, if more than one name)

Name: Dr. Samiullah

Email: sammilah@msu.edu.sa

8. Course Objectives

Course Objective	On completion of this course, the student is expected to be familiar with the design many aspects of logic circuits. 1- Studying the four types of the numerical systems that used in computer applications. 2- Understanding the basic building blocks i.e. basic logic gates. 3- Understanding the basic logic operations and laws of Boolean algebra. 4- Studying the other electronic circuits such as comparator, decoder, encoder and adders which would help to implement any logic circuit.
------------------	---

9. Teaching and Learning Strategies

Strategy	The methods that used in teaching of digital circuits module are: 1- Lecture by the instructor (lecturer).
----------	---

	<p>2. Class discussion directed by the instructor.</p> <p>3. Recitation oral questions by teacher answered orally by students.</p> <p>4. Using of white board by the instructor as aid in teaching.</p> <p>5- Tutorial.</p> <p>6- Reading some lectures notes aloud to emphasize on the important points.</p>
--	---

10. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understand the lesson	Numerical Systems	Lecture using whiteboard	Quiz, discussion and homework
2	2	The student understand the lesson	Decimal to binary conversion and vice versa	Lecture using whiteboard	Quiz, discussion and homework
3	2	The student understand the lesson	Decimal to octal and hexadecimal and vice versa	Lecture using whiteboard	Quiz, discussion and homework
4	2	The student understand the lesson	Binary addition and subtraction	Lecture using whiteboard	Quiz, discussion and homework
5	2	The student understand the lesson	Basic logic gates OR, AND & NOT	Lecture using whiteboard	Quiz, discussion and homework
6	2	The student understand the lesson	ANDOR, NOR, XOR & XNOR Gates	Lecture using whiteboard	Quiz, discussion and homework
7	2	The student understand the lesson	Gates representation using only NAND or NOR gates	Lecture using whiteboard	Quiz, discussion and homework
8	2	The student understand the lesson	Boolean Algebra & De Morgan theorem	Lecture using whiteboard	Quiz, discussion and homework
9	2	The student understand the lesson	ROM & PLD	Lecture using whiteboard	Quiz, discussion and homework
10	2	The student understand the lesson	X-Map for 2, 3, & 4 inputs	Lecture using whiteboard	Quiz, discussion and homework
11	2	The student understand the lesson	Truth table & X-Map	Lecture using whiteboard	Quiz, discussion and homework
12	2	The student understand the lesson	Simplification of different logic circuit using X-Map	Lecture using whiteboard	Quiz, discussion and homework
13	2	The student understand the lesson	Two-bit binary numbers comparison	Lecture using whiteboard	Quiz, discussion and homework
14	2	The student understand the lesson	Binary to oral decoder	Lecture using whiteboard	Quiz, discussion and homework
15	2	The student understand the lesson	Decimal to binary encoding & decimal to binary decoding	Lecture using whiteboard	Quiz, discussion and homework
16	2	The student understand the lesson	Half adder, full adder Circuits	Lecture using whiteboard	Quiz, discussion and homework
17	2	The student understand the lesson	Full subtractor	Lecture using whiteboard	Quiz, discussion and homework
18	2	The student understand the lesson	Parallel subtraction circuit	Lecture using whiteboard	Quiz, discussion and homework

19	2.	The student understands the lesson.	RS Flip-flop JK Flip-flop D Flip-flop	Lecture using whiteboard	Quiz, discussion and homework.
20	2.	The student understands the lesson.	Comparison between different Flip-flops	Lecture using whiteboard	Quiz, discussion and homework.
21	2.	The student understands the lesson.	Counters	Lecture using whiteboard	Quiz, discussion and homework.
22	2.	The student understands the lesson.	Ripple counters	Lecture using whiteboard	Quiz, discussion and homework.
23	2.	The student understands the lesson.	Asynchronous parallel counter	Lecture using whiteboard	Quiz, discussion and homework.
24	2.	The student understands the lesson.	Shift registers	Lecture using whiteboard	Quiz, discussion and homework.
25	2.	The student understands the lesson.	ROM, PROM, EPROM, GAL, PLD	Lecture using whiteboard	Quiz, discussion and homework.
26	2.	The student understands the lesson.	DAC	Lecture using whiteboard	Quiz, discussion and homework.
27	2.	The student understands the lesson.	ADC	Lecture using whiteboard	Quiz, discussion and homework.
28	2.	The student understands the lesson.	ADCA	Lecture using whiteboard	Quiz, discussion and homework.
29	2.	The student understands the lesson.	ADCCZ	Lecture using whiteboard	Quiz, discussion and homework.
30	2.	The student understands the lesson.	Voltage to Frequency converter	Lecture using whiteboard	Quiz, discussion and homework.

11. Course Evaluation

- 1- Midterm theoretical exam 10/100
- 2- Midterm practical lab exam 10/100
- 3- Second term theoretical exam 10/100
- 4- Second term practical lab exam 10/100
- 5- Student activities 10/100
- 6- Final theoretical exam 40/100
- 7- Final practical lab exam 10/100

12. Learning and Teaching Resources

Required textbooks (curricular books, if any)	None
Main references (courses)	Fundamentals of Logic Design, Enhanced Edition (Dr. Charles H. Roth, Larry L. Kinney etc.)
Recommended books and references (scientific journals, reports...)	Fundamentals of Logic Design, Enhanced Edition (Dr. Charles H. Roth, Larry L. Kinney etc.)

Course Description Form

25. Course Name:

Human rights

26. Course Code:

27. Semester / Year: Year

28. Description Preparation Date:

03/02/2024

29. Available Attendance Forms: in person attendance

Theoretical lecture + scientific visits

30. Number of Credit Hours (Total) / Number of Units (Total):

30 hours per week/ 1 unit

31. Course administrator's name (mention all, if more than one name):

Name: Dr. Yaser Tareq Alabd

Email: yaserabd2@gmail.com

32. Course Objectives:

Course At the end of the course the student will be able to:
Objective 1. Know about human rights.

2. In addition, the student will be able to deal with different Theories of human right.

3. Teaching and Learning Strategies:

Strategy At the beginning of every theoretical session, there is an introduction to the lecture topic. This would involve most of the questions that can be asked about the topic and will be answered during the lecture. Students will take through a discussion in order to find the pre-answers to those questions.

4. Course Structure

Theoretical

Work	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method

1 st week	2	Introduction	The student understands the lesson.	Theoretical lecture	oral examination and quiz
2 nd week	2	Explain the term of human rights	The student understands the lesson.	Theoretical lecture	oral examination and quiz
3 rd week	2	The historical of human rights	The student understands the lesson.	Theoretical lecture	oral examination and quiz
4 th week	2	Development of human rights	lesson	Theoretical lecture	oral examination and quiz
5 th week	2	Development of human rights	The student understands the lesson.	Theoretical lecture	oral examination and quiz
6 th week	2	Development of human rights	lesson	Theoretical lecture	oral examination and quiz
7 th week	2	Human rights and Semitic civilization	The student understands the lesson.	Theoretical lecture	oral examination and quiz
8 th week	2	Human rights in Roman civilization	lesson	Theoretical lecture	oral examination and quiz
9 th week	2	Human rights in the Nile Valley civilization	The student understands the lesson.	Theoretical lecture	oral examination and quiz
10 th week	2	Introduction to human rights	lesson	Theoretical lecture	oral examination and quiz
11 th week	2	Human rights in Islam	The student understands the lesson.	Theoretical lecture	oral examination and quiz
12 th week	2	Human rights in the Christian religion	lesson	Theoretical lecture	oral examination and quiz
13 th week	2	Human rights in the Islamic religion	The student understands the lesson.	Theoretical lecture	oral examination and quiz
14 th week	2	Human rights in the Islamic religion	lesson	Theoretical lecture	oral examination and quiz
15 th week	2	Comparison between other religions and Islam	The student understands the lesson.	Theoretical lecture	oral examination and quiz
16 th week	2	Democracy and Islam	lesson	Theoretical lecture	oral examination

5. Course Evaluation

First semester 20%, second semester 20%, activities 10%, final exam 50%.

1. Learning and Teaching Resources	
Required textbooks (curricular books): Human Rights book any)	
Main references (sources):	The organization of human rights magazine
Recommended books and references (scientific journals, reports...):	

Course Description Form

1. Course Name: Applications of Computer

2. Course Code:

3. Semester / Year: Year

4. Description Preparation Date: 8\3\2024

5. Available Attendance Forms: in person attendance

6. Number of Credit Hours (Total) / Number of Units (Total): 90

7. Course administrator's name (mention all, if more than one name)

Name: Bushra Khodur Abbas
Email: bushra.abbas.mj@mu.edu.qa

8. Course Objectives

Course Objectives	Teaching the students about the computer and some applications.
-------------------	---

9. Teaching and Learning Strategies

Strategy	Internet
----------	----------

10. Course Structure

Week	Hours	Required Learning	Unit or subject name	Learning method	Evaluation method

		Outcomes			
Week 1:	Theoretical & Practical-1	Data flow, Computer Machine, Screen Shows	Computer Definition, Software, Hardware, Computer Generations.	Lectures and practical training	Written exams And practical training
Week 2:	Theoretical & Practical-2	Computer Machine, Ms-Dos system	MS-DOS Operating System, Definition, Internal commands, External commands	Lectures and practical training	Written exams And practical training
Week 12:	Theoretical & Practical-3	Computer Machine, MS-DOS System	Internal commands: Dir, Del, Time, Date, Cls, RD, CD, MD, Echo, Prompt, Ren < copy, vol, ver, path, External Commands: Edit, tree, scopy, format, chkdsk, diskcopy	Lectures and practical training	Written exams And practical training
Week 22:	Theoretical & Practical-4	Computer Machine, Windows System	Operating System Windows: Desktop, icons, Taskbar, Start, Shutdown, My computer, Control Panel, Windows medi	Lectures and practical training	Written exams And practical training

			player, Calculator, Paint, Note Pad, Help		
Work 16:	Computer Practical	Computer Machine, Screen Show	Computer Viruses, Antivirus.	Lotus and graft writing	Written exam And practical training

11 Course Evaluation

The degree is distributed:

- 1- 10 marks for the first theoretical semester and 10 marks for practical.
- 2-10 marks for the second semester, theoretical + 10 marks for practical
- 3-10 marks for student activities
- 4-50 marks final exam

12 Learning and Teaching Resources

Required textbooks (curricular books, if any)	Computer and its Applications
Main references (sources)	Currently available methodical book
Recommended books and references (scientific journals, reports...)	Printed
Electronic References, Websites	Attached

Course Description Form

1. Course Name: Mathematics	
2. Course Code:	
3. Semester / Year: Year:	
4. Description Preparation Date: 13/03/2024	
5. Available Attendance Forms: in person attendance Theoretical lecture	
6. Number of Credit Hours (Total) / Number of Units (Total) 60 hours/ 4 unit	
7. Course administrator's name (mention all, if more than one name) Name: Mohammed H. Khashan Email: drkhshan@atu.edu.iq	
8. Course Objectives	
Course Objectives	At the end of the course the student will be able to: 1. The student understands the laws and mathematical issues 2. To solve simple and complex electrical circuits using mathematics 3. Knows the applications of Engineering Mathematics
9. Teaching and Learning Strategies	
Strategy	1. Discuss the students and ask questions about the topic of the lecture and how to think critically and analytically, and then guide them towards how to solve the problem in a way that suits the topic. 2. Explain the material in a consistent manner commensurate with initial inquiries and discussions of the topic, in addition to using the available means of explanation that help to consolidate the lesson through solved examples and exercises that provoke brainstorming students. 3. The use of feedback and assessment of the student's comprehension of the material.

5. Course Structure

Theoretical

Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
1 st week	2hr	Types of matrices, operations on matrices	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
2 nd week	2hr	Solving linear equations using determinants (Cramer's rule)	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
3 rd week	2hr	Vectors - vector analysis scalar and Vector quantities - vector algebra operations on vectors - plane angle	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
4 th week	2hr	Orthogonal vectors scalar and directional multiplication applications.	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
5 th week	2hr	Trigonometric function - trigonometric relations - trigonometric functions	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
6 th week	2hr	Exponential functions Hyperbola functions and their applications	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
7 th week	2hr	Logarithms - laws of logarithms and logarithmic functions applications	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
8 th week	2hr	Differential - derivative by definition - derivative of algebraic functions - chain rule	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
9 th week	2hr	Standard implicit functions higher order derivatives	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
10 th week	2hr	Derivation of trigonometric and logarithmic functions	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
11 th week	2hr	The derivative of exponential functions	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
12 th week	2hr	Applications of the derivative - the equation of tangent and velocity - acceleration and velocity	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
13 th week	2hr	Increasing and decreasing minor and great settings	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
14 th week	2hr	General physical and engineering applications	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam
15 th week	2hr	Inequality - inequality integration of algebraic-trigonometric functions	The student understands the lesson	Theoretical lecture	Solving exercises + daily exam

1st week	2a	Interpretation of exponential functions	The student understands the lesson	practical lectures	Solving exercises + daily exam
17 weeks	2b	Definite integrations applications - the area under the curve between two curves	The student understands the lesson	practical lectures	Solving exercises + daily exam
18th week	2b	Riemann's volumes - the length of the curved arc	The student understands the lesson	practical lectures	Solving exercises + daily exam
19th week	2a	Physical and engineering applications	The student understands the lesson	practical lectures	Solving exercises + daily exam
20,21, 22nd week	2b	General methods of integration, including: decomposition, representation, the use of partial, exponential and logarithmic functions and their applications	The student understands the lesson	practical lectures	Solving exercises + daily exam
23rd week	2b	Numerical methods in integration - the base of the program	The student understands the lesson	practical lectures	Solving exercises + daily exam
24,25th week	2b	Solving linear, homogeneous and linear differential equations with their various applications	The student understands the lesson	practical lectures	Solving exercises + daily exam
26th week	2b	Complex numbers addition, subtraction, multiplication and division	The student understands the lesson	practical lectures	Solving exercises + daily exam
27th week	2b	The polar and spherical formats and the relationships between them and their types	The student understands the lesson	practical lectures	Solving exercises + daily exam
28th week	2b	Powers and roots - interpretation of roots	The student understands the lesson	practical lectures	Solving exercises + daily exam
29th week	2b	Statistical operations - frequency distributions - histogram - frequency curve	The student understands the lesson	practical lectures	Solving exercises + daily exam
30th week	2b	Absolute measure and deviation [Standard deviation] the relationship between the mean and the median	The student understands the lesson	practical lectures	Solving exercises + daily exam

6. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams... etc.

7. Learning and Teaching Resources

Required textbooks (curricular books only)	Applied mathematics-yaqoub sibagha
---	------------------------------------

Main references (sources)	Solving electrical circuits-Joseph Methods for solving differential equations-Khal Ahmed Samarai-Yahya Abdul said Calculus ((Thomas)) Laplace transformation
Recommended books and references (Scientific journals, reports...)	All books and journals which includes the applied mathematics
Electronic References, Websites	All applied mathematics websites on the internet

Course Description Form

33. Course Name: Electrical Circuits & Measurements

34. Course Code:

35. Semester / Year: Year

36. Description Preparation Date: Feb 2nd 2024

37. Available Attendance Forms: In person attendance

38. Number of Credit Hours (Total) / Number of Units (Total) : 120H/8 U

39. Course administrator's name (mention all, if more than one name)

Name: Ayad Muslim Hamzah
Email: Engayad79@stu.edu.iq

40. Course Objectives: The student will be able to apply general electrical laws and theories of DC & AC electrical networks and analyze.

Course Objectives	<ul style="list-style-type: none"> • Apply general electrical laws when analyzing electrical circuits. • Choose the most suitable application when analyzing DC & AC circuits. • Understanding the different basic electrical theories and apply them to mathematical applications. • Connecting single - phase and three-phase equipment and dealing with different types of loads.
--------------------------	--

41. Teaching and Learning Strategies

Strategy	Teaching and learning methods
	4- White board & marker.
	5- Data show.
	Practical applications in Labs.
	Evaluation methods
	4- Daily exams (Quizzes).
	5- Home works.
	6- Midterm and final exams.
	7- Direct questions during the theoretical lectures.
	8- Exams + Oral and written activities, practical and laboratory exercises.
	Emotional and Value goals
	Evaluate the student's benefit after each week.

42. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1-	4	Weekly quizzes	System of units used in electricity and units of measurement for each substance (its parts and multiples) - Mathematical applications for converting values using units - Definition of basic units of voltage, current.	Lecture + Lab	Report and oral exam.

			and resistance - Components of an electrical circuit - Ohm's law - Factors affecting the value of resistance - Specific resistance of conductive and insulating materials - Effect of temperature on the value of resistance - thermal coefficient of resistance with the solution of practical examples.		
2 nd	4	Weekly quizzes	<p>DC circuits include:</p> <ol style="list-style-type: none"> 1. Connecting resistors in series with examples. 2. Connecting resistors in parallel with examples. 3. Mixed connection of resistors with examples. 4. The star and delta connection of resistors and the conversion from each to the other with examples. 	Lecture + Lab	Report and oral exam.
3 rd	4	Weekly quizzes	Applications on series, parallel, mixed, star and delta circuits.	Lecture + Lab	Report and oral exam.
4 th	4	Weekly quizzes	Kirchhoff's Laws - Kirchhoff's Law for Current and Voltage with Practical Examples.	Lecture + Lab	Report and oral exam.
5 th	4	Weekly quizzes	Maxwell's law with solutions and practical examples.	Lecture + Lab	Report and oral exam.
6 th	4	Weekly quizzes	Thevenin's theory - definition of the theory - how to apply it in DC.	Lecture + Lab	Report and oral exam.
7 th	4	Weekly quizzes	Norton's theory - definition of the theory - how to apply it in DC.	Lecture + Lab	Report and oral exam.
8 th	4	Weekly quizzes	Practical examples of Thevenin and Norton theorems.	Lecture + Lab	Report and oral exam.
9th	4	Weekly	Superposition theory - definition	Lecture +	Report and

		quizzes	of the theory - steps of its application in solving DC circuits that contain more than one source - solving definitional examples of current and voltage source (DC power supplies) and how to convert from one to the other - the theory of maximum power transferring - definition of the theory and the derivation of its relations - examples.	Lab	oral exam.
10 th	4	Weekly quizzes	Alternating quantities - the definition of the characteristics of alternating current - how to generate alternating current and its wave drawing and its relationships - includes the definition of the RMS effective value and its average value and its relations to find the form factor and value factor for irregular waveforms with practical examples.	Lecture + Lab	Report and oral exam.
11 th	4	Weekly quizzes	Alternating vector quantities - definition - their phase and graphic representation - phase angle and how to find it - finding the result of vector quantities includes multiplication, division, addition and subtraction with practical examples.	Lecture + Lab	Report and oral exam.
12 th	4	Weekly quizzes	The effect of alternating current on a circuit containing only resistance A circuit containing only pure inductance A circuit containing only pure capacitance Finding the phase angle between current and voltage for each	Lecture + Lab	Report and oral exam.

			Circuit with examples.		
13 th	4	Weekly quizzes	The effect of alternating current on a circuit containing (resistance and inductance in series - resistance and capacitance in series - resistance and inductance and capacitance in series) - finding the relationship between current and voltage in the three cases, phase angle - the total impedance of the circuit with practical examples.	Lecture + Lab	Report and oral exam.
14 th	4	Weekly quizzes	The effect of alternating current on a circuit containing (resistance and inductance - resistance and capacitance - resistance and inductance and capacitance) in parallel - Finding the relationship between voltage and current in the three cases - phase angle - total impedance of the circuit with practical examples.	Lecture + Lab	Report and oral exam.
15 th	4	Weekly quizzes	Using the I-OPERATOR characterization or the complex factor to find the total impedance, total permittivity, current, voltage, and phase angle for circuits connecting impedances in series and parallel with solving examples.	Lecture + Lab	Report and oral exam.
16 th	4	Weekly quizzes	Resonance circuits, including series and parallel resonance circuits (defining the state of resonance and how to reach it - calculating current, voltage, impedance, phase angle and frequency at resonance - finding	Lecture + Lab	Report and oral exam.

			the bandwidth - quality factor - drawing the relationship between inductive and capacitive reactance with frequency - solving examples for both cases)		
17 th	4	Weekly quizzes	Application of theorems such as Norton and Thevenin theorem and matching on alternating current circuits with solving examples.	Lecture + Lab	Report and oral exam.
18 th	4	Weekly quizzes	Power in alternating current circuits, including calculating the power on circuits containing (resistance only - Inductance only - capacitive only resistance, inductance and capacitive, respectively and in parallel). Defining the active and passive capacity and how to calculate them.	Lecture + Lab	Report and oral exam.
19 th	4	Weekly quizzes	Total apparent power (definition) - how to draw a power triangle - power factor - definition and its effect on alternating current circuits - how to improve power factor with applied examples.	Lecture + Lab	Report and oral exam.
20 th	4	Weekly quizzes	Theory of maximum power transfer in alternating current circuits - derivation of its relationship with practical examples.	Lecture + Lab	Report and oral exam.
21 st	4	Weekly quizzes	Analysis of electrical networks by node voltage method - introduction - node voltages - number of node voltage equations - node voltage equations by examination -	Lecture + Lab	Report and oral exam.

			common admittance - transmission admittance		
22 nd	4	Weekly quizzes	Practical examples of the analysis of electrical networks by the node method.	Lecture + Lab	Report and oral exam.
23 rd	4	Weekly quizzes	three-phase alternating current circuits - its definition and how to generate alternating current (one phase - two phases - three phases) with a drawing of each circuit of the star and triangular wiring diagrams in three-phase alternating current circuits and the special relationships for calculating the current and voltage of the line and phase and the total power and power of the line - phase capacity. The characteristics of each connection when used in balanced and unbalanced loads, with examples of solution.	Lecture + Lab	Report and oral exam.
24 th	4	Weekly quizzes	Solve practical examples of three-phase alternating current and trigonometric and star connections of balanced and unbalanced loads.	Lecture + Lab	Report and oral exam.
25 th	4	Weekly quizzes	Methods for measuring power for three-phase loads - a wattmeter - how to connect it to the circuit to measure the effective power and calculate the reactive power and the apparent power. With an example solution - measuring power using a wattmeter and voltage - how to find the total power in this way and in the case	Lecture + Lab	Report and oral exam.

			of star and delta conduction - using two wattmeters - three wattmeters.		
26 th	4	Weekly quizzes	Transient circuit states - DC transient states - circuits in transient state - (RLC - RC - RL) circuits.	Lecture + Lab	Report and oral exam.
27 th	4	Weekly quizzes	Transient alternating currents - transient sinusoidal currents in RLC, RC, RL circuits - transmission currents.	Lecture + Lab	Report and oral exam.
28 th	4	Weekly quizzes	Self-inductance of the coil (electromagnetic induction) - its definition - special relations for finding the self-inductance of the coil - mutual induction between two coils - relationships for finding mutual induction and according to the type of connection of the two coils and includes: - Synergistic linkage; - Reverse series link.	Lecture + Lab	Report and oral exam.
29 th	4	Weekly quizzes	Transformers - installation of the transformer - diagram of the transformer - its characteristics - its working principle and special relationships - types of transformers and solutions of examples.	Lecture + Lab	Report and oral exam.
30 th	4	Weekly quizzes	Curves of current growth and decay from an inductive circuit - Explanation of this circuit and its effect in DC - General relations of growth and decay of current in	Lecture + Lab	Report and oral exam.

		the coil - Drawing current and calculating the time constant - Solution examples - Charging and discharging capacitors. The use of capacitors in DC circuits; includes the general relationship of charging and discharging the capacitor and drawing the current. The effect of a time constant and its calculation - solutions of examples.	
--	--	---	--

43. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc:

- 5- Midterm theoretical exam 10/100
- 6- Midterm practical lab exam 10/100
- 7- Second term theoretical exam 10/100
- 8- Second term practical lab exam 10/100
- 9- Student activities 10/100
- 10-Final theoretical exam 40/100
- 11-Final practical lab exam 10/100

44. Learning and Teaching Resources

Required textbooks (curricular books, if any)	
Main references (sources)	1- Electrical Technology (Edward Hughes). 2- Basic Circuit (A.M.Brooks) ,pergamon press. 3- Introduction To Electric Circuit (M.Romanowicz) John Wiley . 4- Basic Electrical Engineering (Fitzgerald& Riggins)than) Graw
Recommended books and references (scientific journals, reports...)	Lectures notes.
Electronic References, Websites	YouTube site.

Course Description Form

1. Course Name: Physiology	
2. Course Code:	
3. Semester / Year: Year	
4. Description Preparation Date: 15/3/2024	
5. Available Attendance Forms: in person	
6. Number of Credit Hours (Total) / Number of Units (Total) Number of Units (Total) 60 hours/year	
7. Course administrator's name (mention all, if more than one name) Name: Zaineb Ahmed Email: Zaineb.ahmed.inj@stu.edu.iq	
8. Course Objectives:	
Course Objectives	1 – Study of the organs of the body of living organisms and the systems that make them up. 2- Identify information about the functions of the human body's organs through experiments conducted on animals. 3- Describing the functions of organs in living organisms 4- Explaining and interpreting these functions in terms of physical and chemical laws.
9. Teaching and Learning Strategies	
Strategy	The methods used in teaching the physiology lesson are: 1. Lecture by the teacher (lecturer). 2. Class discussion by the teacher. 3. Oral questions are recited by the teacher and answered orally by the students. 4- The teacher's use of the whiteboard as an aid in teaching. 5- Read some lecture notes out loud to emphasize important points.

10. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Understanding physiology	Muscle tissue - and types of muscles	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
2	2	Understanding physiology	Electrical changes - simple muscle contraction	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
3	2	Understanding physiology	Muscle pain	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
4	2	Understanding physiology	Muscle stress	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
5	2	Understanding physiology	Sensory nervous system	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
6	2	Understanding physiology	The role of nerves in transmitting stimuli-reflexes	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
7	2	Understanding physiology	Sympathetic nervous system	PowerPoint lecture and explanation on whiteboard	Semester exams, discussion and Quiz
8	2	Understanding physiology	Parasympathetic nervous system	PowerPoint lecture and explanation	Semester exams, discussion

				on a whiteboard	and Quiz
9	2	Understanding physiology	Circulatory system and heart	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
10	2	Understanding physiology	Blood vessels - their components - types	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
11	2	Understanding physiology	blood pressure	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
12	2	Understanding physiology	The role of blood in the body	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
13	2	Understanding physiology	Breathing - types of breathing	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
14	2	Understanding physiology	Respiratory movements- alveolar pressure	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
15	2	Understanding physiology	Lung expansion - respiratory capacity	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
16	2	Understanding physiology	Vital capacity - components of inhaled air	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz
17	2	Understanding physiology	The digestive system, its structure, parts, and importance	PowerPoint lecture and explanation on a whiteboard	Semester exams, discussion and Quiz

18	2	Understanding physiology	Digestive secretions - stages of digestion:	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
19	2	Understanding physiology	Digestion of carbohydrates - Digestion of proteins	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
20	2	Understanding physiology	Absorption, assimilation, and defecation	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
21	2	Understanding physiology	(Urinary system) kidney - ureter - bladder - external orifice	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
22	2	Understanding physiology	Composition of the parts of the system - the importance of the urinary system	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
23	2	Understanding physiology	Diuretic formation - urinary urea and urinary stones	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
24	2	Understanding physiology	The components of urine and their properties	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
25	2	Understanding physiology	Endocrine	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
26	2	Understanding physiology	Types of endocrine glands and their importance	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
27	2	Understanding physiology	Secretions - endocrine glands	PowerPoint lecture and explanation	Semester exams discussion

				on a whiteboard	and Quiz
28	2	Understanding physiology	Endocrine work.	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
29	2	Understanding physiology	Reproductive system	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz
30	2	Understanding physiology	Reproductive system functions	PowerPoint lecture and explanation on a whiteboard	Semester exams discussion and Quiz

11 Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc.

Daily tests.

Discussing with students during the lecture

Student activity in the lecture

First semester exam

Second semester exam

Final exam

Course Description Form

45.	Course Name: Electronics Circuits				
46.	Course Code:				
47.	Semester / Year: Year				
48.	Description Preparation Date: 12/3/2024				
49.	Available Attendance Forms: in person attendance In person attendance				
50.	Number of Credit Hours (Total) / Number of Units (Total) 4 hours a week / 8 units				
51.	Course administrator's name (mention all, if more than one name) Name: Hassoon Salman Neamah FAHAMA Email: hassoon.fahama@atu.edu.iq				
52.	Course Objectives				
Course Objectives	<p>By the end of the course, students will be able to:</p> <ul style="list-style-type: none"> • Identify different electronics elements and know the function of each. • Design and implementation of variable electronic circuit required in MID. 				
53.	Teaching and Learning Strategies				
Strategy	<ul style="list-style-type: none"> • Visualization techniques are used to process/summarize the given and instructed knowledge in class. • Teamwork by dividing the class into groups to complete a task to encourage students of mixed abilities to work with one another. • Student-led Classroom to give more power to students allows them to become self-aware of their strengths. • Open discussion in the class to let students feel more confident, comfortable and build trust with the teacher. 				
54.	Course Structure				
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method

1-2	4	1- Fundamentals of Zener Diode	Presentation (Projector and whiteboard) at experimental work using electronics lab	Open discussion, pic, and direct question
3	4	2- Silicon control rectifier and its applications		
4	4	3- Theoretical exercise		
5-6	4	4- Bipolar junction transistor		
7-8	4	5- Applications of Bipolar junction transistor		
9	4	6- Theoretical exercise about Bipolar junction transistor		
10	4	7- Electronic oscillator		
11	4	8- Theoretical exercise about electronic oscillator		
12-13	4	9- Introduction to Operation Amplifier		
14-15	4	10- Features and characteristics of Operation Amplifier		
16	4	11- Inverting Operation Amplifier		
17	4	12- Non-inverting Operation Amplifier		
18	4	13- Comparator Amplifier		
19	4	14- Summing & Subtractor/Difference Amplifier		
20-21	4	15- Introduction of Active Filters		
22-23	4	16- Operational amplifier applications: differential circuit, mathematical equations		
24-25	4	17- Nonlinear applications of operational amplifiers		

55. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc

56. Learning and Teaching Resources

Course Description Form

57. Course Name:	programmable logic controller
58. Course Code:	
59. Semester / Year: Year	2023-2024
60. Description Preparation Date:	10/2/2024
61. Available Attendance Forms: in person attendance Official attendance list	
62. Number of Credit Hours (Total) / Number of Units (Total)	Number of credit hours (30) for both theory and practical Number of Units (8)
63. Course administrator's name (mention all, if more than one name)	Name: Mohammad Karim Khanap Email: m.khanap@sttu.edu.iq
64. Course Objectives	Course I - Introducing the student to the components of programmed controllers and how to

Objectives	<p>program and use them.</p> <p>2– Learn about programmable digital controllers (Pic) and how to deal with them and program them.</p>
-------------------	---

65. Teaching and Learning Strategies

Strategy	Providing an educational environment, it provides students with the necessary knowledge make the most of the available learning opportunities.
-----------------	--

66. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Understanding the lecture:	Introducing the vocabulary of the academic subject and distributing exam grades. An introductory overview of programmed control and its application fields	Theoretical lecture	Weekly exams pre and post questions
2 And 3	4	Understanding the lecture:	Sensors compatible with the programmed controller (temperature, proximity, pressure, movement, etc.)	Theoretical lecture	Weekly exams pre and post questions
4	2	Understanding the lecture:	Electrical switches and electrical contacts and how they work	Theoretical lecture	Weekly exams pre and post questions

5	2	Understanding the lecture	Learn about the ladder programming language	Theoretical lecture	Weekly exams pre and p questions
6	2	Understanding the lecture	Implementation of logic circuits (and or, not, etc.), by using ladder programming language	Theoretical lecture	Weekly exams pre and p questions
7	2	Understanding the lecture	Relays and their types and how to implement them by using ladder programming language with examples.	Theoretical lecture	Weekly exams pre and p questions
8	2	Understanding the lecture	How to holding the signal and releasing it in ladder language.	Theoretical lecture	Weekly exams pre and p questions

9	2	Understanding the lecture	Digital counters in the ladder language with practical examples	Theoretical lecture	Weekly exams pre and post questions
10	2	Understanding the lecture	Practical example power converter circuit (Changecov Circuit). By using ladder programming language.	Theoretical lecture	Weekly exams pre and post questions
11	2	Understanding the lecture	Traffic signal application example	Theoretical lecture	Weekly exams pre and post questions
12	2	Understanding the lecture	An applied example of opening and closing a gate based on motion sensors	Theoretical lecture	Weekly exams pre and post questions

13	2	Understanding the lecture	Single-phase motor operating circuit with on and off switches) motor starter) by using ladder programming language	Theoretical lecture	Weekly exams pre and post questions
14	2	Understanding the lecture	Three-phase motor drive circuit (Delta Star).	Theoretical lecture	Weekly exams pre and post questions
15	2	Understanding the lecture	Practical example an electric elevator circuit	Theoretical lecture	Weekly exams pre and post questions

67. Course Evaluation

Distribution of the score out of 100 according to the tasks assigned to the student:-

- 1- Second semester exams = 20 theoretical + 20 practical's = 20 marks.
- 2- Final exams = 40 theoretical + 10 practical's = 50 marks.
- 3- Annual evaluation, such as attendance, daily preparation, oral exams, reports, activities, etc. = 10 marks.

68. Learning and Teaching Resources

Required textbooks (curricular books, if any)	PLC book
Main references (sources)	Sources of ancient and modern communication books
Recommended books and references (scientific)	Related journals and research papers

Journals, reports, ...)	
Electronic References, Websites	Trusted and approved sites only

74.	Number of Credit Hours (Total) / Number of Units (Total): 120h	
75.	Course administrator's name (mention all, if more than one name) Name: Sae Alia Email: sae.alia@nu.edu.jo	
76.	Course Objectives	
Course Objectives	<p>The student learns about:</p> <ul style="list-style-type: none"> • The basic components of measuring devices and methods of using them in measurements. • Factors affecting the accuracy of readings and how to find the appropriate device. • Calibrating and organizing measuring devices. 	
77.	Teaching and Learning Strategies	
Strategy	<p>i. Peer Teaching and Assessment:</p> <p>Poor teaching and assessment activities require students to understand the subject material and decide how to share it with others. Students learn as they teach concepts, explain ideas, plan educational activities and test knowledge. Through peer teaching and assessment, your students have their organizational and</p>	

collaborative skills, discuss how to give and receive feedback, and evaluate their own learning.

2. Brainstorming

Creative juices flow during simple or group brainstorming sessions. Students focus on one topic and freely discuss their ideas, thoughts and opinions. There are no right or wrong answers during brainstorming sessions where numerous, creative ideas are put forth and debated on. These brainstorming sessions help your students develop confidence and their communication and collaboration skills.

3. Student-Led Classes

Students must fully understand coursework, spend time to prepare an in-depth lesson and be prepared to answer questions in order to lead a class. With this teaching strategy, students take on individual tasks or group assignments to demonstrate their knowledge, boost their presentation skills and discover how to share and collaborate with their peers. Students are sometimes invited to lead the class at OWIS and are assessed for their lesson complexity, preparation and creativity. This teaching method promotes student ownership and helps teachers and students to understand interests, strengths and potential areas for improvement.

7b. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understands the lesson	Definitions (accuracy, degree of accuracy, risk numbers, types of errors, statistical analyses, probability of error, specific errors)	Theoretical lecture	Weekly exams - pre and post questions
2	2	The student understands the lesson	Definitions (accuracy, degree of accuracy, risk numbers, types of errors, statistical analyses, probability of error, specific errors)	Theoretical lecture	Weekly exams - pre and post questions
3	2	The student understands the lesson	Classification of devices, marking devices and the foundations based on them, effective moments (deflection, torque, critical torque,	Theoretical lecture	Weekly exams - pre and post questions

			distinguishing aspects)		
4	2	The student understands the lesson.	Moving coil measuring devices, Differential movement, structure, moment equations, disadvantages and advantages of moving coil measuring devices.	Theoretical lecture	Weekly exams - pre and post questions
5	2	The student understands the lesson.	Direct current ammeter, ammeter with parallel compensation, direct current voltmeter, voltmeter with series resistance, mathematical examples for the two aforementioned devices, voltmeter sensitivity, mathematical examples	Theoretical lecture	Weekly exams - pre and post questions
6	2	The student understands the lesson.	Methods of measuring resistance, with ammeter and voltmeter, mathematical examples, ohmmeter, series ohmmeter, parallel ohmmeter, calibration of direct current devices, voltage, mathematical examples.	Theoretical lecture	Weekly exams - pre and post questions
7	2	The student understands the lesson.	Methods of measuring resistance, with ammeter and voltmeter, mathematical examples, ohmmeter, series ohmmeter, parallel ohmmeter, calibration of direct current devices, voltage, mathematical examples.	Theoretical lecture	Weekly exams - pre and post questions
8	2	The student	DC bridges,	Theoretical	Weekly

		understands the lesson.	Wheatstone bridge, working principle, measurement errors, Kelvin bridge; double Kelvin bridge, mathematical examples.	lecture	weekly - pre and post questions
9	2	The student understands the lesson.	Alternating current bridges and bridge equilibrium conditions, application of balance equations	Theoretical lecture	Weekly exams - pre and post questions
10	2	The student understands the lesson	Inductance measurement bridge, inductance comparison bridge, Maxwell bridge, Hay bridge	Theoretical lecture	Weekly exams - pre and post questions
11	2	The student understands the lesson.	Capacity measuring bridges, capacity comparison bridges, shunt bridges, and Wayne bridges	Theoretical lecture	Weekly exams - pre and post questions
12	2	The student understands the lesson	Wayne bridge for measuring frequency, uses of lack of balancing instruments, how to balance the bridge	Theoretical lecture	Weekly exams - pre and post questions
13	2	The student understands the lesson	Devices for measuring alternating current, electrodynamometers, structures, and current equation	Theoretical lecture	Weekly exams - pre and post questions
14	2	The student understands the lesson	Mobile steel measuring devices, installation, moment equations, advantages and disadvantages	Theoretical lecture	Weekly exams - pre and post questions
15	2	The student understands the lesson	Uniform type measuring devices - full-wave uniform - half-wave uniform - examples.	Theoretical lecture	Weekly exams - pre and post questions
16	2	The student understands the lesson	The use of electrodynamometers in measuring single-phase power.	Theoretical lecture	Weekly exams - pre and post questions

			composition, and the deflection angle equation		
17	2	The student understands the lesson.	Frequency scale, compositions and working principle	Theoretical lecture	Weekly exams - pre and post questions
18	2	The student understands the lesson.	Thermal devices, thermosensitive device for measuring non-gramular shapes	Theoretical lecture	Weekly exams - pre and post questions
19	2	The student understands the lesson.	Signal oscilloscope, block diagram, cathode ray diode, assembly, screen, factors for selecting screens, types of screens, optical grid	Theoretical lecture	Weekly exams - pre and post questions
20	2	The student understands the lesson.	Vertical deflection system, functional diagram, input, monitor, attenuator, vertical amplifier, delay line, function, and types of delay line	Theoretical lecture	Weekly exams - pre and post questions
21	2	The student understands the lesson.	Horizontal deflection system, basic sweep generator, sweep synchronization, mag sweep, horizontal amplifier, oscilloscope figures, passive and active voltage figures, current figures, high voltage figures, Lissajous shapes, phase calculation, frequency calculation	Theoretical lecture	Weekly exams - pre and post questions
22	2	The student understands the lesson.	Horizontal deflection system, basic sweep generator, sweep synchronization, mag sweep, horizontal amplifier, oscilloscope figures, passive and active voltage figures, current figures, high voltage figures,	Theoretical lecture	Weekly exams - pre and post questions

			Lissajous shapes, phase calculation, frequency calculation		
23	2	The student understands the lesson	Dual-beam signal plotter, storage signal plotter	Theoretical lecture	Weekly exams - pre- and post questions
24	2	The student understands the lesson	Electroonic measuring devices, electronic voltmeter, basic transistor type circuit	Theoretical lecture	Weekly exams - pre- and post questions
25	2	The student understands the lesson	Analog voltmeter selection considerations, input impedance, voltage range, decibels, sensitivity, versus strip width, current measurements	Theoretical lecture	Weekly exams - pre- and post questions
26	2	The student understands the lesson	Analog voltmeter selection considerations, input impedance, voltage range, decibels, sensitivity, versus strip width, current measurements	Theoretical lecture	Weekly exams - pre- and post questions
27	2	The student understands the lesson	Analog voltmeter selection considerations, input impedance, voltage range, decibels, sensitivity, versus strip width, current measurements	Theoretical lecture	Weekly exams - pre- and post questions
28	2	The student understands the lesson	Simple frequency counter, display counters, time base, signal processing n measurement extending the frequency range of the counter, automatic counters and calculators	Theoretical lecture	Weekly exams - pre- and post questions
29	2	The student understands the lesson	Simple frequency counter, display counters, time base,	Theoretical lecture	Weekly exams - pre- and post

			signal processing n. measurements extending the frequency range of the counter, arithmetic counters and calculators		questions
30	2	The student understands the lesson:	Simple frequency counters, display counters, time base, signal processing n. measurements extending the frequency range of the counter, arithmetic counters and calculators	Theoretical lecture	Weekly exams - pre and post questions

Course Evaluation(practical)

Week	hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understands the lesson	Familiarizing the student with the measuring devices in the laboratory.	Practical lecture	Weekly exams - pre and post questions
2	2	The student understands the lesson	measure the sensitivity of the galvanometer	Practical lecture	Weekly exams - pre and post questions
3	2	The student understands the lesson	expand the measuring range of the ammeter	Practical lecture	Weekly exams - pre and post questions
4	2	The student understands the lesson	build a series ohmmeter	Practical lecture	Weekly exams - pre and post questions
5	2	The student understands the lesson	Building a parallel ohmmeter	Practical lecture	Weekly exams - pre and post questions

6	2	The student understands the lesson	Calibrating the DC ammeter	Practical lecture	Weekly exams - pre and post questions
7	2	The student understands the lesson	Calibration of a DC voltmeter	Practical lecture	Weekly exams - pre and post questions
8	2	The student understands the lesson	the phenomena of load	Practical lecture	Weekly exams - pre and post questions
9	2	The student understands the lesson	the Wheaton bridge	Practical lecture	Weekly exams - pre and post questions
10	2	The student understands the lesson	Bridge induction comparison	Practical lecture	Weekly exams - pre and post questions
11	2	The student understands the lesson	Menzel Bridge	Practical lecture	Weekly exams - pre and post questions
12	2	The student understands the lesson	the bridge	Practical lecture	Weekly exams - pre and post questions
13	2	The student understands the lesson	a capacity comparison bridge	Practical lecture	Weekly exams - pre and post questions
14	2	The student understands the lesson	the Shuntik Bridge	Practical lecture	Weekly exams - pre and post questions
15	2	The student understands the lesson	Wayne's bridge to measure the voltage	Practical lecture	Weekly exams - pre and post questions
16	2	The student understands the lesson	Wayne bridge for measuring frequency	Practical lecture	Weekly exams - pre and post questions
17	2	The student understands the lesson	Electro dynamometers and measuring devices of the combined type	Practical lecture	Weekly exams - pre and post questions

14	2	The student understands the lesson	Using voltmeters to measure power	Practical lecture	Weekly exams - pre and post questions
19	2	The student understands the lesson	Using wattmeters to measure power	Practical lecture	Weekly exams - pre and post questions
20	2	The student understands the lesson	Use a frequency meter	Practical lecture	Weekly exams - pre and post questions
21	2	The student understands the lesson	Calibration of voltmeters and ammeters for alternating current	Practical lecture	Weekly exams - pre and post questions
22	2	The student understands the lesson	Calibration of the oscilloscope	Practical lecture	Weekly exams - pre and post questions
23	2	The student understands the lesson	Using a dual-trace oscilloscope to measure the phase angle	Practical lecture	Weekly exams - pre and post questions
24	2	The student understands the lesson	Measuring an angle using the Lissajous method	Practical lecture	Weekly exams - pre and post questions
25	2	The student understands the lesson	Frequency measurement using the Lissajous method	Practical lecture	Weekly exams - pre and post questions
26	2	The student understands the lesson	Comparing the measurement error now between a digital and a regular voltmeter	Practical lecture	Weekly exams - pre and post questions
27	2	The student understands the lesson	Comparing frequency measurement with a frequency measuring device and an oscilloscope	Practical lecture	Weekly exams - pre and post questions
28	2	The student understands the lesson	Calibration and maintenance of the ammeter/voltmeter	Practical lecture	Weekly exams - pre and post questions
29	2	The student understands the lesson	Calibration and maintenance of the oscilloscope	Practical lecture	Weekly exams - pre and post questions

30	2	The student understands the lesson.	Calibration and maintenance of digital voltmeters.	Practical lecture	Weekly exams - pre and post questions
----	---	---	--	----------------------	--

In-Campus Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc.

2. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Electronic measuring devices and measurement techniques / Hani Azziz, Abdullaah Muhammed, Gabriel Ibraa, Technical Education Authority / Mansal University Press / [1991]
Main references (sources)	<ul style="list-style-type: none"> ▪ "Electronic Instrumentation and measurement Techniques "By: Croper-Helfick Prentice – hall international ▪ "A Course in electrical and electronic measurement and instrumentation By : A.K. Sasthrey
Recommended books and references (scientific journals, reports, ...)	https://www.scribd.com/document/11910000/Electronic-Measuring-Devices-and-Techniques

Current Development Team

1. Course Name: electronic medical instrumentation.
2. Course Code:
3. Semester / Year: Year :
4. Description Preparation Date: 14/2/2024
5. Available Attendance Forme: In person attendance
6. Number of Credit Hours (Total) : Number of Units (Total) : 20
7. Course administrator's name (mention all, if more than one name)
Name: Rehma Shams
Email: Shamsulhusna@gmail.com

8. Course Objectives**Course Objectives**

The student will be able to know the exact parts of a medical instrumentation and how to maintain it.

9. Teaching and Learning Strategies**Strategy****1. Peer Tutoring and Assessment**

Peer tutoring and assessment activities require students to understand the subject matter and decide how to share it with others. Students learn as they teach concepts, explain ideas, plan educational activities and test knowledge. Through peer tutoring and assessment, your children hone their organizational and collaborative skills, discover how to give and receive feedback, and evaluate their own learning.

2. Brainstorming

Creative juices flow during simple or group brainstorming sessions. Students focus one topic and freely discuss their ideas, thoughts and opinions. There are no right/wrong answers during brainstorming sessions where numerous, creative ideas are born and debated on. These brainstorming sessions help your children have confidence and their communication and collaboration skills.

3. Student-Led Classes

Students must fully understand coursework, spend time to prepare an in-depth lesson, be prepared to answer questions in order to lead a class. With this teaching strategy, students take on individual tasks or group assignments to demonstrate their knowledge, build their presentation skills and discover how to share and collaborate with their peers. Students are sometimes invited to lead the class at OWTS and are assessed for their level of complexity, preparation and creativity. This teaching method promotes student ownership and helps teachers and students to understand interests, strengths and potential areas for improvement.

10. Course Evaluation (Theoretical)

Week	hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understands the lesson	Introduction to electronic medical devices	Practical lecture	Weekly exams - pre and post questions
2	2	The student understands the lesson	Medical terminology in English and Latin	Practical lecture	Weekly exams - pre and post questions
3	2	The student understands the lesson	The circulatory system, the parts of the	Practical lecture	Weekly exams - pre and post questions

			heart, the major and minor circulation		
4	2	The student understands the lesson	H/T device, basic stages of the device	Practical lecture	Weekly exams - pre and post questions
5	2	The student understands the lesson	Types of electrodes	Practical lecture	Weekly exams - pre and post questions
6	2	The student understands the lesson	Measuring blood pressure, types of blood pressure devices, measuring blood pressure device	Practical lecture	Weekly exams - pre and post questions
7	2	The student understands the lesson	Pneumatic pressure device; electronic pressure device	Practical lecture	Weekly exams - pre and post questions
8	2	The student understands the lesson	Cardiac defibrillation device, its types	Practical lecture	Weekly exams - pre and post questions
9	2	The student understands the lesson	Electrodes of vibration devices, efficacy of vibration devices	Practical lecture	Weekly exams - pre and post questions
10	2	The student understands the lesson	Pacemaker classification device heart lung	Practical lecture	Weekly exams - pre and post questions
11	2	The student understands the lesson	Heart rate monitor - VCT	Practical lecture	Weekly exams - pre and post questions
12	2	The student	Mechanical	Practical	Weekly

		understands the lesson	breathing devices	lecture	exams - pre and post questions
13	2	The student understands the lesson.	Sensors, sphygmomanometers, breathing monitoring devices	Practical lecture	Weekly exams - pre and post questions
14	2	The student understands the lesson	Patient monitor device	Practical lecture	Weekly exams - pre and post questions
15	2	The student understands the lesson	The central nervous system how to distribute sensations and commands, whether voluntary or involuntary	Practical lecture	Weekly exams - pre and post questions
16	2	The student understands the lesson	EEG device	Practical lecture	Weekly exams - pre and post questions
17	2	The student understands the lesson	Muscle electricity and the sensory system. The muscular system	Practical lecture	Weekly exams - pre and post questions
18	2	The student understands the lesson	Muscle planning device. The basic stages of the device and its parts	Practical lecture	Weekly exams - pre and post questions
19	2	The student understands the lesson	Ultrasonic devices, their types, and the physics of ultrasound devices	Practical lecture	Weekly exams - pre and post questions
20	2	The student understands the	Fetal monitoring	Practical lecture	Weekly exams - pre

		lesson	device components and components of the device solution		and post questions
21	2	The student understands the lesson	Delivery monitor device components and stages of the device	Practical lecture	Weekly exams - pre- and post questions
22	2	The student understands the lesson	Sensor device components and stages of the device	Practical lecture	Weekly exams - pre- and post questions
23	2	The student understands the lesson	Sensor display device	Practical lecture	Weekly exams - pre- and post questions
24	2	The student understands the lesson	Amplifiers and their types	Practical lecture	Weekly exams - pre- and post questions
25	2	The student understands the lesson	Tracer devices and their types	Practical lecture	Weekly exams - pre- and post questions
26	2	The student understands the lesson	Display devices of both types- analog and digital	Practical lecture	Weekly exams - pre- and post questions
27	2	The student understands the lesson	Electronic circuits for surgical caterization devices and their types	Practical lecture	Weekly exams - pre- and post questions
28	2	The student understands the lesson	Surgical caterization devices and their types	Practical lecture	Weekly exams - pre- and post questions
29	2	The student understands the lesson	Operating room equipment, and devices	Practical lecture	Weekly exams - pre- and post questions
30	2	The student	The	Practical	Weekly

		understands the lesson	operating room and how to isolate it electrically and thermally	lecture	classes - pre and post questions

Course Description Form

79. Course Name: CONTROL

80. Course Code:

81. Semester / Year: Year

82. Description Preparation Date: 10/2/2024

83. Available Attendance Forms: in person attendance

84. Number of Credit Hours (Total) / Number of Units (Total)

Number of credit hours (30) for both theory and practical

Number of Units (8)

85. Course administrator's name (mention all, if more than one name)

Name: Mohammed Najeh Nemah

Email: mohammed.nemah@atu.edu.iq

86. Course Objectives

Course Objectives	<p>Through this course, the student will study the basic sciences of the various branches of control engineering.</p> <ul style="list-style-type: none"> • General objective: To familiarize the student with the basics and principles of control engineering. • Specific objective: For the student to be able to understand the principles of electrical control in medical devices, distinguish between open-circuit and closed-circuit control circuits, and examine the components of control circuits of both type open-circuit and closed-circuit.
--------------------------	--

A - Expected learning outcomes of the program

1- Knowledge:

Scientific and applied knowledge	Providing the student with scientific and applied knowledge that enables him to operate and control medical devices.
Preparing competent technicians	Preparing competent technicians who have the ability to keep pace with the rapid development in the field of controlling operation of medical devices.

2- Skills:

Acquire development and updating skills	Acquiring skills to develop and modernize medical devices
---	---

3- Ethics:

Be responsible and manage time at work.	Giving the graduate the ability to learn responsibility, time management, and professionalism in performing the tasks assigned to him.
Dedication, loyalty and commitment	Dedication, sincerity, and adherence to rules, laws, and regulations that ensure.

87. Teaching and Learning Strategies

Strategy	Providing an educational environment; It provides students with the necessary knowledge to make the most of the available learning opportunities.
-----------------	---

88. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understand the lesson	Introduction and definitions of control engineering - open circuit and closed circ - examples	Theoretical lecture	Weekly exams - pre and post questions
2	2	The student understand the lesson	Control systems - the need for automated control - types of automated control	Theoretical lecture	Weekly exams pre and post questions
3	2	The student understand the lesson	The basic form of the control system - block diagram - transformation function	Theoretical lecture	Weekly exams pre and post questions
4	2	The student understand the lesson	Algebra of block diagrams and their Inverse	Theoretical lecture	Weekly exams pre and post questions
5	2	The student understand the lesson	Simplifying complex block diagrams	Theoretical lecture	Weekly exams pre and post questions
6	2	The student understand the lesson	Systems with multiple entrances and exits	Theoretical lecture	Weekly exams pre and post questions
7	2	The student understand the lesson	Signal flow diagrams Mason's method - its laws	Theoretical lecture	Weekly exams pre and post questions
8	2	The student understand the lesson	Extracting the transformational function using Mason's method - examples	Theoretical lecture	Weekly exams pre and post questions
9	2	The student understand the lesson	Physical systems - electrical and mechanical systems	Theoretical lecture	Weekly exams pre and post questions
10	2	The student understand the lesson	Extracting the transformational functions of the system	Theoretical lecture	Weekly exams pre and post questions

		- theories of compatibility between systems		
11	2	The student understands the lesson: Laplace transform - transformation theorem - inverse Laplace transform.	Theoretical lecture	Weekly exams pre and post questions
12	2	The student understands the lesson: Use transformation to solve differential equations	Theoretical lecture	Weekly exams pre and post questions
13	2	The student understands the lesson: Analog Calculator - the op amplifier in analog calculator	Theoretical lecture	Weekly exams pre and post questions
14	2	The student understands the lesson: Solve differential equations using an analog calculator	Theoretical lecture	Weekly exams pre and post questions
15	2	The student understands the lesson: Comparison between analog circuits - electronic circuits - modeling.	Theoretical lecture	Weekly exams pre and post questions
16	2	The student understands the lesson: Types of input signal stability and system type	Theoretical lecture	Weekly exams pre and post questions
17	2	The student understands the lesson: Stability	Theoretical lecture	Weekly exams pre and post questions
18	2	The student understands the lesson: Identifying the 3 types Determining the poles and zeros of the S-domain control system and determining stability	Theoretical lecture	Weekly exams pre and post questions
19	2	The student understands the lesson: Routh stability - scale theories	Theoretical lecture	Weekly exams pre and post questions
20	2	The student understands the lesson: Use the scale to find out	Theoretical lecture	Weekly exams pre and post questions
21	2	The student understands the lesson: Limits of stability - examples.	Theoretical lecture	Weekly exams pre and post questions
22	2	The student understands the lesson: Response - the transient response and its classification into temporal and frequency - the temporal response of first-order system.	Theoretical lecture	Weekly exams pre and post questions

23	2	The student understand the lesson	Time response of a second order system	Theoretical lecture	Weekly exams pre and post questions
24	2	The student understand the lesson	Factors determining stability in time and circumstances of the use - examples.	Theoretical lecture	Weekly exams pre and post questions
25	2	The student understand the lesson	Frequency response Types of frequency response - examples	Theoretical lecture	Weekly exams pre and post questions
26	2	The student understand the lesson	Electronic controllers and their types	Theoretical lecture	Weekly exams pre and post questions
27	2	The student understand the lesson	Uses of electronic controllers in control systems and their impact on system performance	Theoretical lecture	Weekly exams pre and post questions
28	2	The student understand the lesson	Error rate - types of errors in the system	Theoretical lecture	Weekly exams pre and post questions
29	2	The student understand the lesson	How to calculate the error rate	Theoretical lecture	Weekly exams pre and post questions
30	2	The student understand the lesson	Root locus method - curve rules used for this method - examples.	Theoretical lecture	Weekly exams pre and post questions

89. Course Evaluation

Distribution of the score out of 100 according to the tasks assigned to the student:-

- 1- First semester exam = 10 theoretical + 10 practical = 20 marks.
- 2- Second semester exam = 10 theoretical + 10 practical = 20 marks.
- 3- 1- Final exam = 40 theoretical + 10 practical = 50 marks.
- 4- Annual evaluation, such as attendance, daily preparation, oral exam, reports, activities, etc. = 10 marks.

90. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Control book
Main references (sources)	Sources of ancient and modern cont lessons books
Recommended books and references (scientific journals, reports...)	Related journals and research papers
Electronic References, Websites	Trusted and approved sites only

Course Description Form

91. Course Name: CONTROL practical

A - Expected learning outcomes of the program

1- Knowledge

Scientific and applied knowledge	Providing the student with scientific and applied knowledge that enables him to operate and control medical devices.
Preparing competent technicians	Preparing competent technicians who have the ability to keep pace with the rapid development in the field of controlling the operation of medical devices.

2- Skills

Acquire development and updating skills	Acquiring skills to develop and modernize medical devices.
6. Design and development, finding alternatives	Design and development skills, finding alternatives to some parts related to medical devices.

3- Ethics

Be responsible and manage time at work	Giving the graduate the ability to learn responsibility, time management, and professionalism in performing the tasks assigned to him.
Dedication, loyalty and commitment	Dedication, sincerity, and adherence to rules, laws, and regulations that ensure.

99. Teaching and Learning Strategies

Strategy	Providing an educational environment; It provides students with the necessary knowledge to make the most of the available learning opportunities.
-----------------	---

100. Course Structure

Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	The student understand the lesson	Gaining to know the laboratory, safety procedures to write the report and arrange the results sheet	practical lecture	Weekly exams - pre and post questions
2	2	The student understand the lesson	Identify the operational amplifier and correct its properties	practical lecture	Weekly exams - pre and post questions
3	2	The student understand the lesson	Use an op-amp as a reflector	practical lecture	Weekly exams - pre and post questions
4	2	The student understand the lesson	Use the op-amp as summing	practical lecture	Weekly exams - pre and post questions
5	2	The student understand the lesson	Use an operational amplifier practical lecture as a differentiator	practical lecture	Weekly exams - pre and post questions
6	2	The student understand the lesson	Use an operational amplifier practical lecture as a multiplier	practical lecture	Weekly exams - pre and post questions
7	2	The student understand the lesson	Using an op-amp as an integrator	practical lecture	Weekly exams - pre and post questions
8	2	The student understand the lesson	Using an op-amp as an enhanced integrator	practical lecture	Weekly exams - pre and post questions
9	2	The student understand the lesson	Using an op-amp as a differentiator	practical lecture	Weekly exams - pre and post questions
10	2	The student understand the lesson	Using the op-amp as an optimum differentiator	practical lecture	Weekly exams - pre and post questions
11	2	The student understand the lesson	Introduction to control systems and noninertial functions	practical lecture	Weekly exams - pre and post questions
12	2	The student understand the lesson	Study of an open control system	practical lecture	Weekly exams - pre and post questions
13	2	The student understand the lesson	Study of a closed control system	practical lecture	Weekly exams - pre and post questions
14	2	The student understand the lesson	Study of a closed control system with a learning of	practical lecture	Weekly exams - pre and post questions
15	2	The student understand the lesson	Open-control first-order control system design – system specifications and transfer function extraction	practical lecture	Weekly exams - pre and post questions

16	2	The student understands the lesson	Closed circuit (recursing) control system circuit – system specifications and transfer function established.	practical lecture	Weekly exams - pre and post questions
17	2	The student understands the lesson	A second-order control system circuit reflects the time response for three cases.	practical lecture	Weekly exams - pre and post questions
18	2	The student understands the lesson	A second-order control system circuit reflects the time response for three cases.	practical lecture	Weekly exams - pre and post questions
19	2	The student understands the lesson	A second-order system (practical lecture) that calculates the settling time, rise time, and delay time.	practical lecture	Weekly exams - pre and post questions
20	2	The student understands the lesson	Introduction to solving differential equations.	practical lecture	Weekly exams - pre and post questions
21	2	The student understands the lesson	Solving first order differential equations using analog circuits.	practical lecture	Weekly exams - pre and post questions
22	2	The student understands the lesson	Solving second order differential equations using analog circuits.	practical lecture	Weekly exams - pre and post questions
23	2	The student understands the lesson	Implementation in MATLAB The Two-Segment Domain	practical lecture	Weekly exams - pre and post questions
24	2	The student understands the lesson	Proportional Controller	practical lecture	Weekly exams - pre and post questions
25	2	The student understands the lesson	Integral controller	practical lecture	Weekly exams - pre and post questions
26	2	The student understands the lesson	Differential controller	practical lecture	Weekly exams - pre and post questions
27	2	The student understands the lesson	Proportional-Integral controller	practical lecture	Weekly exams - pre and post questions
28	2	The student understands the lesson	Proportional-Differential controller	practical lecture	Weekly exams - pre and post questions
29	2	The student understands the lesson	Proportional - Integral - Differential controller	practical lecture	Weekly exams - pre and post questions
30	2	The student understands the lesson	Steady-state error calculations	practical lecture	Weekly exams - pre and post questions

101. Course Evaluation

Distribution of the score out of 100 according to the tasks assigned to the student -

- 1- First semester exam = 10 theoretical + 10 practical = 20 marks.
- 2 - Second semester exam = 10 theoretical + 10 practical = 20 marks.
- 3- 1 Final exams = 10 theoretical + 10 practical = 20 marks.
- 4- Annual evaluation, such as attendance, daily preparation, oral exams, reports, activities, etc. = 10 marks.

102. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Control book
Main references (sources)	Sources of ancient and modern control lessons books
Recommended books and references	Related journals and research papers

(scientific journals, reports...)

Electronic References, Websites

Trusted and approved sites only

Course Description Form

103. Course Name:

The crimes of the Baath regime in Iraq

104. Course Code:

105. Semester / Year: Year

106. Description Preparation Date:

03/02/2024

107. Available Attendance Forms: in person attendance

108. Number of Credit Hours (Total) / Number of Units (Total)

30 hours/ 1 unit

109. Course administrator's name (mention all, if more than one name)

Name: Laila Yasser Tayeb

Email: laila.tayeb@iu.edu.iq

110. Course Objectives

Course
Objective

At the end of the course the student will be able to:

2. The student gets to know the corrupt crimes.

3. Learn about the dictatorship of the former regime.

4. Teaching and Learning Strategies

Strategy

At the beginning of every theoretical lecture, there is an introduction to the lecture topic. This would include most of the questions that can be asked about the topic and will be answered during the lecture. Students will answer through a discussion or either so that the professor answers those questions.

5. Course Structure

Theoretical					
Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
1 st week	1	Introduction to the concept of crime	The student understands the lesson	Theoretical lecture	oral examination and quiz
2 nd week	1	History of crimes committed by the authority	The student understands the lesson	Theoretical lecture	oral examination and quiz
3 rd week	1	Crime departments	The student understands the lesson	Theoretical lecture	oral examination and quiz
4 th week	1	Crime departments	The student understands the lesson	Theoretical lecture	oral examination and quiz
5 th week	1	Type of international crimes	the lesson	Theoretical lecture	oral examination and quiz
6 th week	1	Type of international crimes	The student understands the lesson	Theoretical lecture	oral examination and quiz
7 th week	1	Human rights in Human civilization	the lesson	Theoretical lecture	oral examination and quiz
8 th week	1	Decisions issued by the Supreme Court	The student understands the lesson	Theoretical lecture	oral examination and quiz
9 th week	1	Decisions issued by the Supreme Court	the lesson	Theoretical lecture	oral examination and quiz
10 th week	1	Decisions issued by the Supreme Court	The student understands the lesson	Theoretical lecture	oral examination and quiz
11 th week	1	Psychological crimes	The student understands the lesson	Theoretical lecture	oral examination and quiz
12 th week	1	Mechanisms of psychological crimes	the lesson	Theoretical lecture	oral examination and quiz
13 th week	1	Psychological effects of crimes	The student understands the lesson	Theoretical lecture	oral examination and quiz
14 th week	1	Health crimes against religion	the lesson	Theoretical lecture	oral examination and quiz
15 th week	1	Health crimes against religion	The student understands the lesson	Theoretical lecture	oral examination and quiz
Practical					
Week	Hours	Unit or subject name	Required Learning Outcomes	Learning method	Evaluation method
16 th week	1	Health policies	The student understands the lesson	Theoretical lecture	oral examination
17 th week	1	Environmental crimes	The student	Theoretical	oral

			understands the lesson	lectures	examination
18 th week	I	Use of internationally prohibited weapons.	The student understands the lesson	Theoretical lecture and examination	and examination
19 th week	I	Use of internationally prohibited weapons.	The student understands the lesson	Theoretical lecture and examination	and examination
20 th week	I	connected with policy.	The student understands the lesson	Theoretical lecture and examination	and examination
21 st week	I	connected with policy.	The student understands the lesson	Theoretical lecture and examination	and examination
22 nd week	I	connected with policy.	The student understands the lesson	Theoretical lecture and examination	and examination
23 rd week	I	Mass grave sites.	The student understands the lesson	Theoretical lecture and examination	and examination
24 th week	I	Introduction to mass graves.	The student understands the lesson	Theoretical lecture and examination	and examination
25 th week	I	Genocide prevention.	The student understands the lesson	Theoretical lecture and examination	and examination
26 th week	I	Genocide prevention.	The student understands the lesson	Theoretical lecture and examination	and examination
27 th week	I	Genocide prevention.	The student understands the lesson	Theoretical lecture and examination	and examination
28 th week	I	Genocide prevention.	The student understands the lesson	Theoretical lecture and examination	and examination
29 th week	I	Genocide prevention.	The student understands the lesson	Theoretical lecture and examination	and examination
30 th week	I	Cross organizations.	The student understands the lesson	Theoretical lecture and examination	and examination

6. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc.

7. Learning and Teaching Resources

Required textbooks (curricular books, if any)	The main book supply by the ministry of big education
Main references (sources)	All human crime's
Recommended books and references (scientific journals, reports...)	

Course Description Form

111. Course Name: Electromechanical medical devices	
112. Course Code:-	
113. Semester / Year: Year	
114. Description Preparation Date: 14-2-2024	
115. Available Attendance Forms: in person attendance	
116. Number of Credit Hours (Total) / Number of Units (Total)	
4 units	
117. Course administrator's name (mention all, if more than one name)	
Name: Sajjad Kadhim Hussein Email: sajjadk.hussein@nu.edu.iq	
118. Course Objectives	
Course Objectives	<ul style="list-style-type: none">student understands the main principle and structure of elect mechanical medical devices.The student learns about how these devices work by tracking the diagram of each device and following the anatomy structure of elect mechanical medical devices.
119. Teaching and Learning Strategies	
Strategy	
120. Course Structure	

Week	Wk n	Required (Learned) Outcome	Unit of subject focus	Learning outcome	Evaluation method
1	2	Student understands lecture	Introduction to open medical devices	Theoretical lecture	Weekly exams Short questions
2	2	Student understands lecture	Identify the component types	Theoretical lecture	Weekly exams Short questions
3	2	Student understands lecture	Determine the ability control infarct	Theoretical lecture	Weekly exams Short questions
4	2	Student understands lecture	Selecting high-precaution	Theoretical lecture	Weekly exams Short questions
5	2	Student understands lecture	Operating and maintain medical and welfare devices	Theoretical lecture	Weekly exams Short questions
6	2	Student understands lecture	Explanation on imaging scanning devices	Theoretical lecture	Weekly exams Short questions
7	2	Student understands lecture	Monitoring viewing devices	Theoretical lecture	Weekly exams Short questions
8	2	Student understands lecture	Explanation on multimeters	Theoretical lecture	Weekly exams Short questions
9	2	Student understands lecture	Magnetic resonance imaging device	Theoretical lecture	Weekly exams Short questions
10	2	Student understands lecture	MRI's degree in device components	Theoretical lecture	Weekly exams Short questions
11	2	Student understands lecture	Special medical device control circuit	Theoretical lecture	Weekly exams Short questions
12	2	Student understands lecture	Wireless operating device	Theoretical lecture	Weekly exams Short questions
13	2	Student understands lecture	Chemical transmitter	Theoretical lecture	Weekly exams Short questions
14	2	Student understands lecture	Simple, simple and complex devices	Theoretical lecture	Weekly exams Short questions
15	2	Student understands lecture	Theoretical minimum of	Theoretical lecture	Weekly exams Short questions
16	2	Student understands lecture	Specification on members of the basic system	Theoretical lecture	Weekly exams Short questions
17	2	Student understands lecture	The minimum impact control was checked	Theoretical lecture	Weekly exams Short questions
18	2	Student understands lecture	Study material for one of the industrial end systems	Theoretical lecture	Weekly exams Short questions
19	2	Student understands lecture	Connecting the end literary device to the patient	Theoretical lecture	Weekly exams Short questions
20	2	Student understands lecture		Theoretical lecture	Weekly exams Short questions
21	2	Student understands lecture	Identify the types machines used in hospital college	Theoretical lecture	Weekly exams Short questions
22	2	Student understands lecture	View the components of anesthesia machine	Theoretical lecture	Weekly exams Short questions
23	2	Student understands lecture	View control medical networks	Theoretical lecture	Weekly exams Short questions
24	2	Student understands lecture	Establishing communication gas network	Theoretical lecture	Weekly exams Short questions
25	2	Student understands lecture	Operating and maintain the monitor	Theoretical lecture	Weekly exams Short questions

26	2	Student understands lecture	Operating and maintain the ultrasound device	Theoretical lecture	Weekly exams Short questions
27	2	Student understands lecture	Operating and maintain device to measure air and bubbles, PH	Theoretical lecture	Weekly exams Short questions
28	2	Student understands lecture	Operating and maintain hemodialysis machine device	Theoretical lecture	Weekly exams Short questions
29	2	Student understands lecture	Operating and maintain the self-analysis device	Theoretical lecture	Weekly exams Short questions
30	2	Student understands lecture	Operating and maintain the laboratory device	Theoretical lecture	Weekly exams Short questions

121. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc

130. Course Objectives					
Course Objectives:		<ul style="list-style-type: none"> • student understands the Excel program and how to apply it via different examples in various fields. • The student should understand the AutoCAD program, application and its benefits. 			
131. Teaching and Learning Strategies					
Strategy:					
132. Course Structure					
Week	Hour no.	Required Learning Outcomes	Other subject items	Learning method	Evaluation method
1	2	Student understands lecture	networks	Theoretical lecture	Weekly exams Short questions
2	2	Student understands lecture	Internet	Theoretical lecture	Weekly exams Short questions
3	2	Student understands lecture	How to deal with the web	Theoretical lecture	Weekly exams Short questions
4	2	Student understands lecture	Learn about people	Theoretical lecture	Weekly exams Short questions
5	2	Student understands lecture	Methods of searching data	Theoretical lecture	Weekly exams Short questions
6	2	Student understands lecture	Excel concept	Theoretical lecture	Weekly exams Short questions
7	2	Student understands lecture	Its benefits, features and methods of operation	Theoretical lecture	Weekly exams Short questions
8	2	Student understands lecture	The main screen and components	Theoretical lecture	Weekly exams Short questions
9	2	Student understands lecture	Cell concept	Theoretical lecture	Weekly exams Short questions
10	2	Student understands lecture	Types of basic data how to enter them	Theoretical lecture	Weekly exams Short questions
11	2	Student understands lecture	How to save a worksheet or workbook, Close program and close the	Theoretical lecture	Weekly exams Short questions
12	2	Student understands lecture	Open the saved file of data and perform some calculations	Theoretical lecture	Weekly exams Short questions
13	2	Student understands lecture	The sum of the function provided by the menu such as count, SUM, Min, Max	Theoretical lecture	Weekly exams Short questions

14	2	Student understands lecture	Learn about the editing process provided by the program, how to copy Data or data transfer.	Theoretical lecture	Weekly exams Short questions
15	2	Student understands lecture	Control cell width- chart style and format by using Coordination tools	Theoretical lecture	Weekly exams Short questions
16	2	Student understands lecture	Dealing with charts- how to convert digital text data into charts	Theoretical lecture	Weekly exams Short questions
17	2	Student understands lecture	Introduction to the AutoCAD system, components, operation, main menu drawing, screen components.	Theoretical lecture	Weekly exams Short questions
18	2	Student understands lecture	Screen dimensions	Theoretical lecture	Weekly exams Short questions
19	2	Student understands lecture	Methods of entering information	Theoretical lecture	Weekly exams Short questions
20	2	Student understands lecture	How to work with toolbars	Theoretical lecture	Weekly exams Short questions
21	2	Student understands lecture	Draw straight, square LINE ZOOM	Theoretical lecture	Weekly exams Short questions
22	2	Student understands lecture	CLOSE - VIEW - NO REGAN - UNDRAW ORTHO -LAST, CROSS, WINDOW - REMOVE PREVIOUS -	Theoretical lecture	Weekly exams Short questions
23	2	Student understands lecture	SAVE, END, QUIT	Theoretical lecture	Weekly exams Short questions
24	2	Student understands lecture	LL - MATCH - SOLI SCALE	Theoretical lecture	Weekly exams Short questions
25	2	Student understands lecture	Create a drawing layer with new specifications	Theoretical lecture	Weekly exams Short questions
26	2	Student understands lecture	Drawing arcs ARC and CIRCLE CIRCLE - MATCH OFFSET	Theoretical lecture	Weekly exams Short questions
27	2	Student understands lecture	MIRROR - TRIM - ADD	Theoretical lecture	Weekly exams Short questions
28	2	Student understands lecture	SLT - EXTEND -	Theoretical lecture	Weekly exams Short questions
29	2	Student understands lecture	Draw an electrical circuit applying the previous instructions	Theoretical lecture	Weekly exams Short questions
30	2	Student understands lecture	Completing the previous diagram with addition of writing	Theoretical lecture	Weekly exams Short questions

1.33. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports — etc.

1.34. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Microsoft Excel 2010: Curtis Frye
Main references (sources)	Books, internet
Recommended books and references (scientific journals, reports...)	Excel lectures from the College of Education, Al-Qadisiyah University Lectures and online resources

	Name: Ahmed Fahim Al-baghdadi Email: Dr.a.albaghdadi@ath.edu.iq				
154.	Course Objectives				
Course Objectives The student will be able to know the exc parts of a computer and how to program		<ul style="list-style-type: none"> • 1 - Apply general electrical laws when analyzing electrical circuits ; - introducing the student to the components of the microcomputer, microprocessors how to program them and their uses • 2- Studying the components of microcomputers : microprocessors (8086-286-8085) and how to c with them and programming them in the language the machine • 			
155.	Teaching and Learning Strategies				
Strategy	1- white board & Marker 2- data show.				
156. Course Structure					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method

1 st	4	Introducing the vocabulary of the subject and the distribution of exam grades - numeric systems - the decimal system - the binary system - the octal system - the hexadecimal system and its importance for microcomputers - conversions between systems.		Theoretical and practical lectures	Oral and written exams
2 nd	4	Introducing microcomputers, their types, and their relationship to other electronic computers		Theoretical and practical lectures	Oral and written exams
3 rd	4	Definitions of microcomputer terms: bit-byte-nibble-word-instruction-program-software-structures-high-level languages-low-level languages-assembly language-machine language.		Theoretical and practical lectures	Oral and written exams
4 th	4	Microcomputer architecture - block diagram - input unit - keyboard - mouse - the two types of mouse and comparison between them - the input port.		Theoretical and practical lectures	Oral and written exams
5 th	4	The transmission system - the data carrier - the address carrier - the line		Theoretical and practical lectures	Oral and written exams

		of control and control - the benefit of each - a comparison between them.			
6 th	4	Output unit - screen - the difference between a computer screen and a TV screen - an output port.	Theoretical and practical lectures	Oral and written exams	
7 th	4	Memory - main memory - read only memory - read and write memory - a comparison between them - auxiliary memories and the difference between them and the main memory.	Theoretical and practical lectures	Oral and written exams	
8 th	4	CPU - Microprocessor - Definition - Block diagram showing the architecture of the microprocessor - Microprocessor 8085 - Terminal diagram and block diagram - Data bus bumpers - Address bus bumpers and a comparison between them.	Theoretical and practical lectures	Oral and written exams	
9 th	4	General registers - A register (accumulator) Arithmetic and logic unit - Flag register - Flags of the 8085 microprocessor - Arithmetic example for determining the state of each flag and interpreting the state - The utility of the flag register.	Theoretical and practical lectures	Oral and written exams	
10 th	4	Informing the Z-80 microprocessor and comparing it with the	Theoretical and practical lectures	Oral and written exams	

		information of the 8085 microprocessor - Arithmetic example - F program counter - SP stack pointer - Instruction register - Instruction decoder - Control unit.		
11 th	4	Directions of the 8085-Z80 microprocessor - symbols used to remember - the machine language - a comparison between them - how to extract the codes in the machine language from the instructions table.	Theoretical and practical lectures	Oral and written exams
12 th	4	Directions of the data transfer group and its types - solving examples - writing an application program.	Theoretical and practical lectures	Oral and written exams
13 th	4	Input and output instructions and their relationship to data transmission group instructions - practical examples.	Theoretical and practical lectures	Oral and written exams
14 th	4	A set of arithmetic instructions and their types - practical examples - their use in amplifying the digital signal with an applied example.	Theoretical and practical lectures	Oral and written exams
15 th	4	The set of logical stimuli and their types - practical examples - and their use in solving digital circuits.	Theoretical and practical lectures	Oral and written exams
16 th	4	group of branching instructions and their types - conditional and unconditional and their dependence on flags -	Theoretical and practical lectures	Oral and written exams

		practical examples - the importance of this group in writing programs.			
17 th	4	The set of control commands - what is the relationship to the activation keys - how do they differ from the rest of the previous instructions.		Theoretical and practical lectures	Oral and written exams
18 th	4	Programs to perform arithmetic operations: addition - subtraction - multiplication - division intended addressing at its types in the 8085 processor		Theoretical and practical lectures	Oral and written exams
19 th	4	Stages of executing a directive - Instructing cycle - Machine cycle - The timing diagram for executing a command (instructing the content of the accumulator to be stored in a memory location for example) - How the microprocessor reads data in memory.		Theoretical and practical lectures	Oral and written exams
20 th	4	Composition of repetition loops - time delay loops - one loop - two loops - three loops application programs for each of them.		Theoretical and practical lectures	Oral and written exams
21 st	4	Generating pulses with required frequency and known duty cycle compared to pulse generators that use integrated circuits.		Theoretical and practical lectures	Oral and written exams
22 nd	4	Practical examples showing how to exploit time-delay loops in		Theoretical and practical lectures	Oral and written exams

		industrial and domestic fields.			
23 rd	4	Writing a program for an ascending counter - with an example application	Theoretical and practical lectures	Oral and written exams	
24 th	4	Writing a program for a countdown timer - with an example	Theoretical and practical lectures	Oral and written exams	
25 th	4	Writing an ascending/descending counter program - with an example application	Theoretical and practical lectures	Oral and written exams	
26 th	4	Microprocessor 8086 - Specifications - Architecture - Terminal Diagram.	Theoretical and practical lectures	Oral and written exams	
27 th	4	Addressing types for the 8086 microprocessor - Directions for data transfer - Directions for multiplication and division - Examples of other instructions.	Theoretical and practical lectures	Oral and written exams	
28 th	4	Comparison of an eight-ranked microprocessor (such as the 8085) and 16-ranked microprocessor (such as the 8086).	Theoretical and practical lectures	Oral and written exams	
29 th	4	Microprocessors with 32 ranks and their most prominent specifications - the microprocessors used in Pentium computers.	Theoretical and practical lectures	Oral and written exams	
30 th	4	A general review of the curriculum vocabulary	Theoretical and practical lectures	Oral and written exams	

157. Course Evaluation

Distributing the score out of 100 according to the tasks assigned to the student such as daily preparation, daily oral, monthly, or written exams, reports ... etc

158. Learning and Teaching Resources

1- Required prescribed books	1- Microcomputer techniques written by (Dr. Riyad Kamal - Abdel Hadi Ahmed) 2- Digital Electronics, written by (Malvino) 3- Modern Digital Electronics, written by (R.P.Jain) (Translated by Dhiya Mahdi)
2-(Main references (sources))	4- Modern Digital Electronic(R.P.Jain)TAT Mc Graw Hill -1984. 5-Micro Computer Technology (Julian Offina Pitman Books -Limited -1982. 6-Micro Computer & Their Interfacing ((RC Holland)) Pergamon Press 1984.
